

HOTEL BOOKING SITE

18CSE373T-E PROGRAMMING IN JAVASCRIPT

Submitted by

ASHISH PRAKASH SINGH (RA2011033010060)

Under the Guidance of

Dr. U. SAKHTI

(Department of Computational Intelligence)

in partial fulfillment of the Requirements for the Degree of

BACHELOR OF TECHNOLOGY

in

COMPUTER SCIENCE ENGINEERING

with specialization in Software Engineering

SRM
INSTITUTE OF SCIENCE & TECHNOLOGY
Deemed to be University u/s 3 of UGC Act, 1956

BONAFIDE CERTIFICATE

Certified that this project report titled “**Hotel booking site using javascript**” is the bonafide work of **Ashish Prakash Singh (RA2011033010060)** who carried out the project work under my supervision. Certified further, that to the best of my knowledge the work reported herein does not form part of any other thesis or dissertation on the basis of which a degree or award was conferred on an earlier occasion for this or any other candidate.

ACKNOWLEDGEMENT

We express our humble gratitude to **Dr C. Muthamizhchelvan**, Vice-Chancellor, SRM Institute of Science and Technology, for the facilities extended for the project work and his continued support.

We extend our sincere thanks to Dean-CET, SRM Institute of Science and Technology, **Dr T.V.Gopal**, for his invaluable support.

We wish to thank **Dr Revathi Venkataraman**, Professor & Chairperson, School of Computing, SRM Institute of Science and Technology, for her support throughout the project work.

We are incredibly grateful to our Head of the Department, **Dr R. Annie Uthra**, Professor, Department of Computational Intelligence, SRM Institute of Science and Technology, for her suggestions and encouragement at all the stages of the project work.

We register our immeasurable thanks to our Faculty Advisor, **Dr A. Robert Singh**, Assistant Professor, Department of Computational Intelligence, SRM Institute of Science and Technology, for leading and helping us to complete our course.

Our inexpressible respect and thanks to my guide, **Dr.U. Sakhti**, Assistant Professor, Department of Computational Intelligence, SRM Institute of Science and Technology, for providing me with an opportunity to pursue my project under his/her/their mentorship. He/She/They provided me with the freedom and support to explore the research topics of my interest. Her/His/Their passion for solving problems and making a difference in the world has always been inspiring.

We sincerely thank the Computational Intelligence Department staff and students, SRM Institute of Science and Technology, for their help during our project. Finally, we would like to thank parents, family members, and friends for their unconditional love, constant support, and encouragement.

ABSTRACT

The purpose of Hotel Booking System is to automate the existing manual system by the help of computerized equipments and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. The required software and hardware are easily available and easy to work with

Hotel Booking System, as described above, can lead to error free, secure, reliable and fast management system. It can assist the user to concentrate on their other activities rather to concentrate on the record keeping. Thus it will help organization in better utilization of resources. The organization can maintain computerized records without redundant entries. That means that one need not be distracted by information that is not relevant, while being able to reach the information.

The aim is to automate its existing manual system by the help of computerized equipments and full-fledged computer software, fulfilling their requirements, so that their valuable data/information can be stored for a longer period with easy accessing and manipulation of the same. Basically the project describes how to manage for good performance and better services for the clients.

INTRODUCTION

The Internet technology has been reached a significant achievement and we almost could get any information we need via surfing on the Web browser at anytime or anywhere where computer and Internet are available. The Online Hotel Booking System offers a simulated environment to let users perform what they could do in the real world via its simple and user-friendly interface. Online Hotel Booking System meets most functions and efficiency of a real Web-based application of the real-life case and offers the extension of future development for more completed capabilities.

It provides people all Over the world with an easy and fast way to book hotel rooms online. The interface of the Hotel Booking System is Web pages that can be accessed with a Web site browser. The system is implemented in HTML (Hyper Text Markup Language), CSS (Cascading Style Sheets) and JAVASCRIPT. Users can perform room booking activities anytime and anywhere by accessing it via Internet.

The Online Hotel Booking System is an easy-to-use application. Everyone who knows how to use a Web browser can easily carry out booking, change the booking details, cancel the booking, change the personal profile, view the booking history, or view the hotel information by following its simple and clear GUI (Graphical user interface) design.

305             settings.activeImage = settings.activeImage + 1;
306             _set_image_to_view();
307             return false;
308         });
309     }
310 }
311 // Enable keyboard navigation
312 _enable_keyboard_navigation();
313 }
```

The screenshot shows a code editor with a sidebar on the left containing a file explorer and a bottom panel with 'OUTLINE' and 'TIMELINE' tabs. The main editor area displays a JavaScript file named 'index.js' with a function `_keyboard_action(objEvent)`. The function handles keyboard events for a lightbox, including closing, navigating to the previous image, and navigating to the next image. A tooltip is visible over the `objEvent` parameter, showing its type as `any`.

```
331 function _keyboard_action(objEvent) {
332     // To ie
333     if ( objEvent == null ) {
334         keycode = event.keyCode;
335         escapeKey = 27;
336     // To Mozilla
337     } else { (parameter) objEvent: any
338         keycode = objEvent.keyCode;
339         escapeKey = objEvent.DOM_VK_ESCAPE;
340     }
341     // Get the key in lower case form
342     key = String.fromCharCode(keycode).toLowerCase();
343     // Verify the keys to close the lighthBox
344     if ( ( key == settings.keyToClose ) || ( key == 'x' ) || ( keycode ==
345         escapeKey ) ) {
346         _finish();
347     }
348     // Verify the key to show the previous image
349     if ( ( key == settings.keyToPrev ) || ( keycode == 37 ) ) {
350         // If we're not showing the first image, call the previous
351         if ( settings.activeImage != 0 ) {
352             settings.activeImage = settings.activeImage - 1;
353             _set_image_to_view();
354             _disable_keyboard_navigation();
355         }
356     }
357     // Verify the key to show the next image
358     if ( ( key == settings.keyToNext ) || ( keycode == 39 ) ) {
359         // If we're not showing the last image, call the next
360         if ( settings.activeImage != ( settings.imageArray.length - 1 ) ) {
361             settings.activeImage = settings.activeImage + 1;
```

CONCLUSION

The Online Hotel Reservation System was developed to replace the manual process of booking for a hotel room or any other facility of the hotel. The old system does not serve the customer in a better way, rather it makes customer data vulnerable. The new system keeps proper records of customers for emergency and security purposes. The hotel's advertising effort is now accompanied by a virtual tour created on the system.
